Online Shopping

Mobile Application

Challenge Synopsis

LONG QUEUES & HEALTH RISKS

Customers hate standing in a queue anywhere - never mind a grocery store. This is a common challenge all customers face, to an extent that they would even avoid stores with long queues. Lines are seen as a waste of time and customers need a faster and more efficient way to do their shopping.

Another challenge customers face besides long lines are the unfriendly and unhelpful staff as they go through frustration as well. This pushes customers away from the company.

Since the rise of Covid-19; people fear for they health - not to mention safety. Customers fear being robbed of their valuables by visiting stores.

Solution Synopsis

ABSA ONLINE SHOPPING APP

Through research and experience; the solution I designed was an online shopping application for mobile.

Unlike any other ordinary mobile app, this one is revolutionary - as it is an ABSA (bank company) app that contains multiple stores within it. I will be making use of Pick n' Pay, Woolworths and Makro as an example as these are everyday stores for a lot of people and the app will provide the store services to these people at their comfort of their homes.

Absa Online Shopping rewards customers with up 30% Cashback rewards, discount vouchers and even free deliveries from the chosen store. This will also help with keeping the monthly costs for retail stores to a minimum.

Customer friendly

Safety

Easy to Use

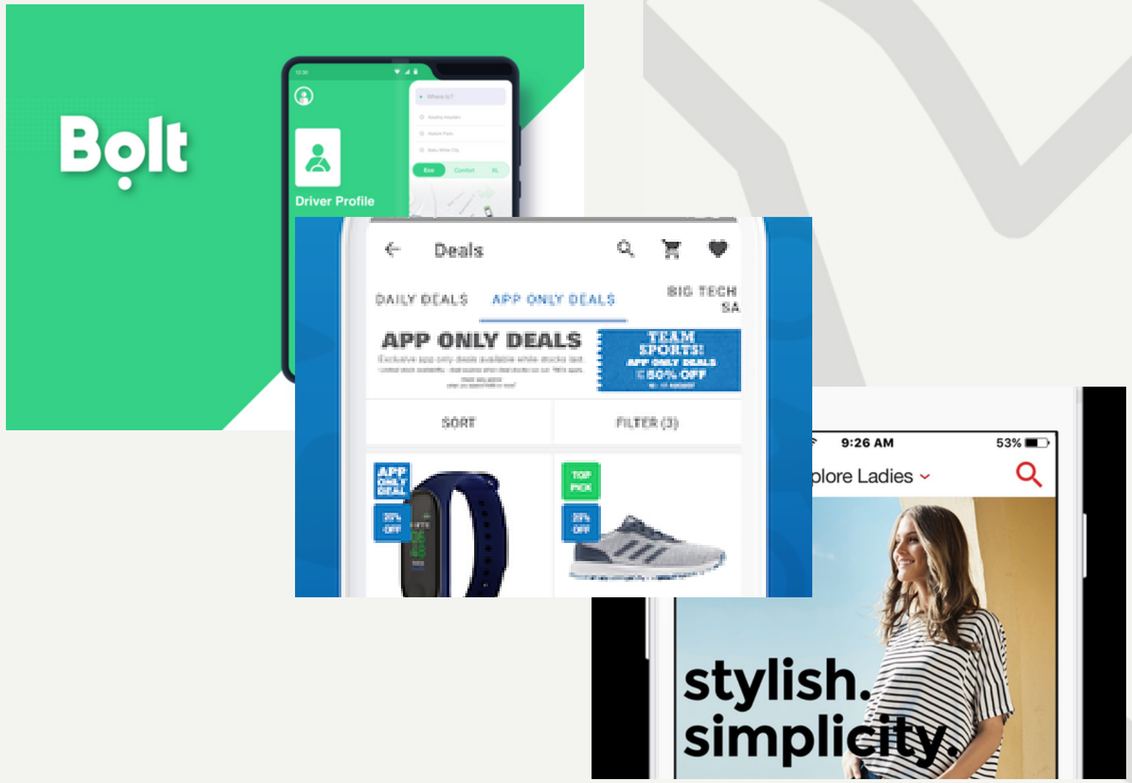
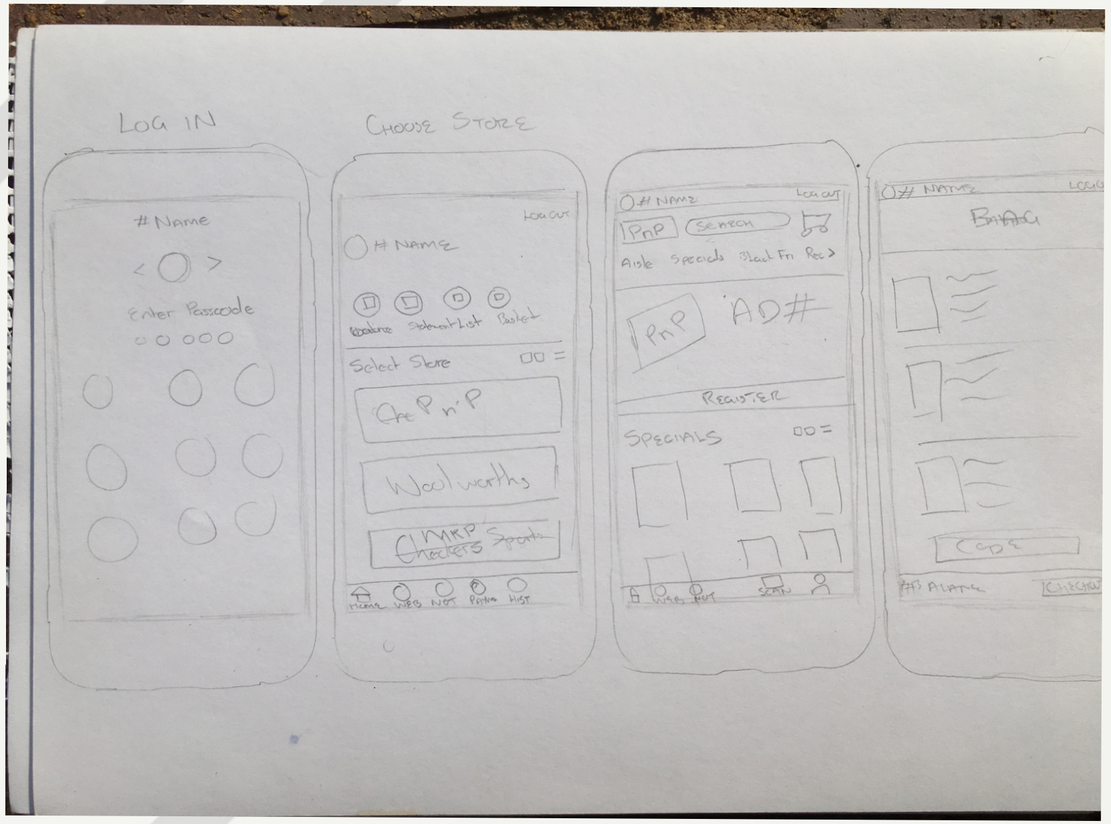
RESEARCH & PLANNING

As part of my research and planning, I drew inspiration from successful mobile applications such as Bolt, Take A Lot, Mr. Price and more.
I implemented elements that helped those apps become successful into the Absa Online Shopping app. Although I made use of elements from other apps. I kept to the look and feel of the Absa brand,



Wireframes Sketch



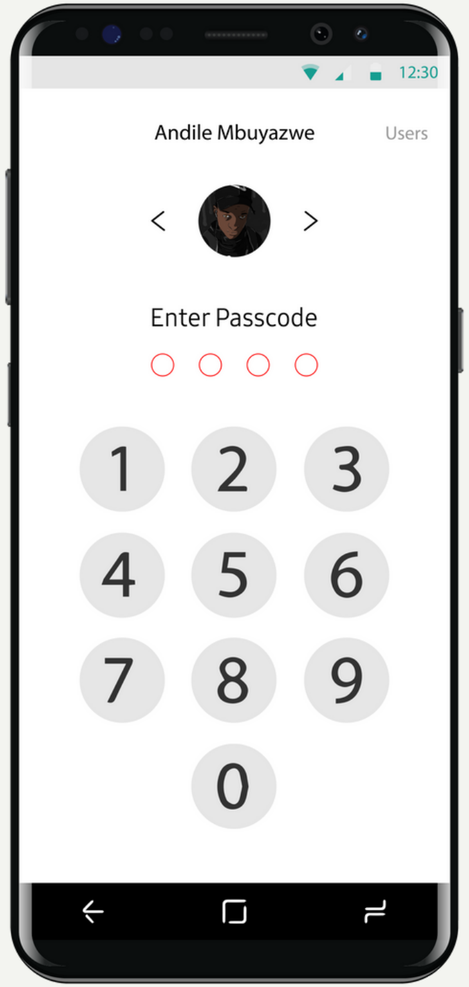
LOGGING IN AND PROFILE

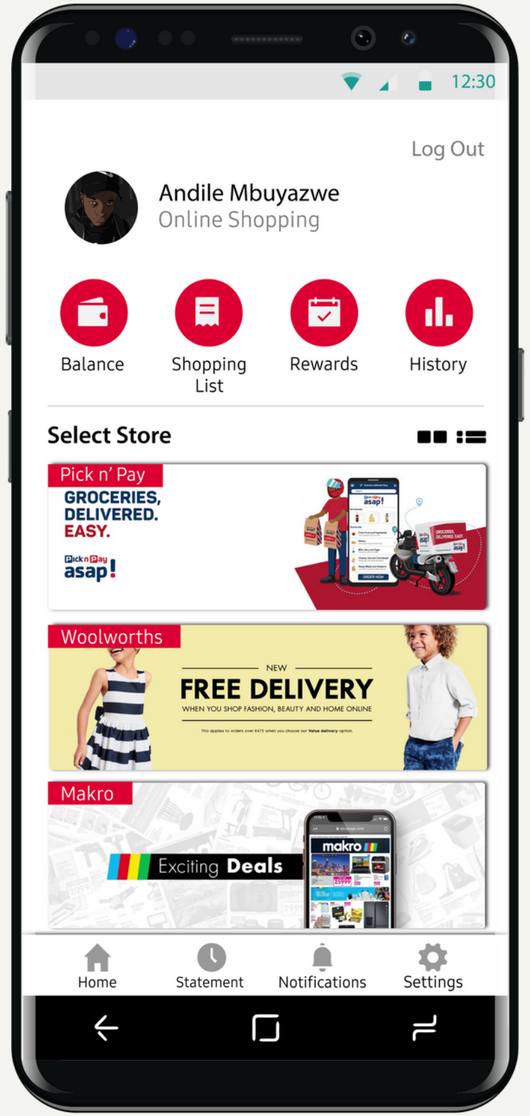
LOG IN

The process of logging in is no different from the Absa banking app; and only Absa users are permitted to make use of the app. You can add or toggle through different users, given that their details are provided.

PROFILE

The Home screen will look familiar to every Absa user, just with a few changes. This screen is inspired by the original Absa banking app Home screen, as I want all customers to relate to it. Here you can select a store you would wish to do your online shopping on; you are also able to check your account balance etc. as it works mot too different from the banking app.





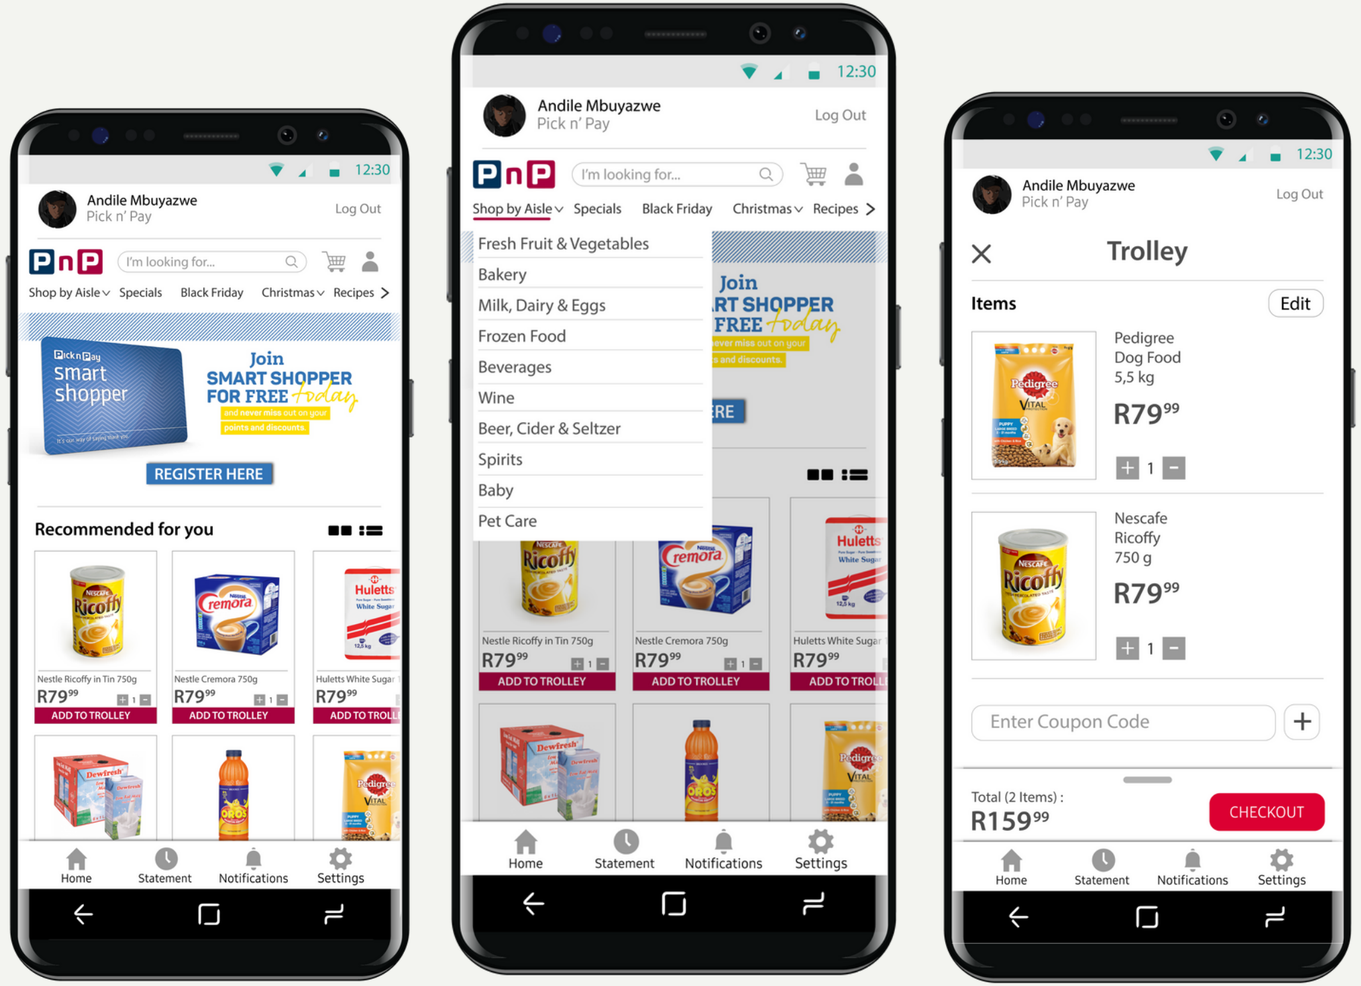
VENTURE AND SHOP

VENTURE

Browse through the app's stores; with easy to navigate screens and a tap away from finding your desired product. Here I made use of Pick n' Pay as an example as to what you can expect when you choose other stores. Each store will have their own UI design and features that you can browse through.

SHOP

Shopping has never been easier. Add your desired products to your trolley and checkout at the comfort of your home. You are also enabled to use your Coupons within the app with every store. You can find any and every product you wouldn't be able to find in the physical store. Information of these products/ store info will be sent to Absa via and API service to ensure efficiency.



Features

Secure

Guaranteed security and inaccessible without PIN or bank details .

History

View a history of all the purchases you've made throughout.

Bank Balance

You are able to view your real-time bank balance within the shopping app.

Cash Back

Up to 30% cash back rewards for use within the app stores.

Shopping List

You are enabled to make a shopping list for your desired items.
